

FileStudio Sample PDF

A hand-written PDF 1.7 file for testing the PDF preview

1 Introduction

This document was written byte by byte by test/generate-samples.js, without a PDF library. It has four pages, a document outline (bookmarks), external and internal links, an embedded image, vector graphics and one landscape page. All text uses the standard fonts Helvetica and Courier, so it can be selected, copied and searched.

The file has a classic cross-reference table, compressed content streams (FlateDecode) and a document information dictionary with a title, so a viewer can show “FileStudio Sample PDF” as the document name.

1.1 Links

External link: <https://example.com>. E-mail link: someone@example.com. Internal link: [jump to page 3 \(the landscape page\)](#). Each link is a separate link annotation over the underlined text.

1.2 Special characters

Accents: café, naïve, Straße, Ærøskøbing, São Paulo, Ñandú, Århus. Symbols: © ® ° € £ ± × ½ μ §. Typography: “double” and ‘single’ quotes, en – and em — dashes, a bullet • and an ellipsis... Characters that PDF strings escape: (parentheses) and a backslash.

1.3 Code

Courier text on a shaded panel (each line is one text object):

```
const pdf = await pdfjsLib.getDocument({ url: 'sample.pdf' }).promise;
const page = await pdf.getPage(3);
console.log(page.view); // [0, 0, 792, 612] -> landscape
const text = await page.getTextContent();
```

2 Image

The picture below is a 192×120 pixel image XObject: 8-bit DeviceRGB samples compressed with FlateDecode, no alpha channel. It is drawn at 288×180 points, so it is scaled up by 1.5.

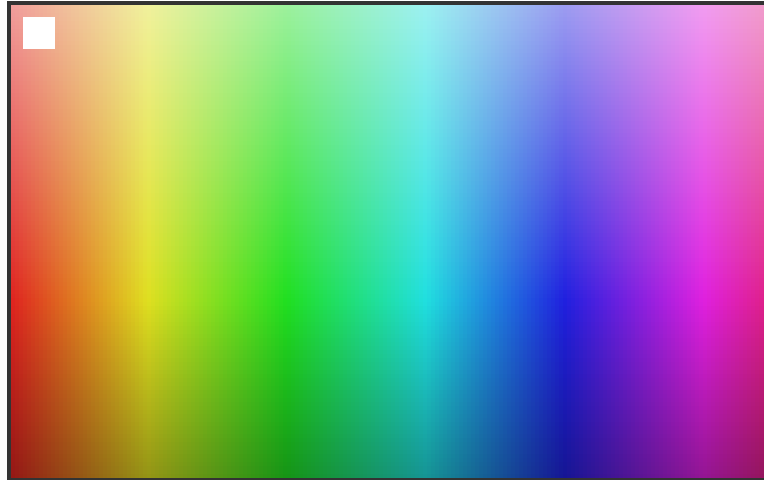

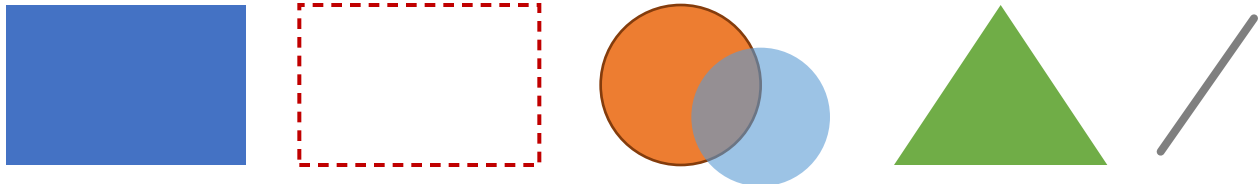

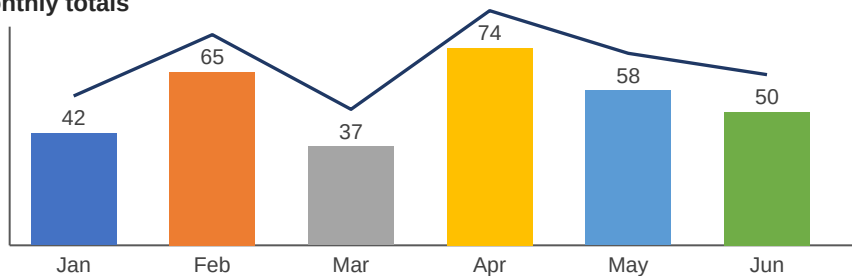

Figure 1: hue/lightness gradient with a dark frame; the white square marks the top-left corner.

2.1 Vector graphics

Path operators: a filled rectangle, a dashed outline, a circle built from four Bézier curves, a second circle at 60 % opacity (ExtGState), a triangle, and a small bar chart with a polyline on top.

Monthly totals

3 Landscape page

This page is 11 × 8.5 inches (792 × 612 points): its MediaBox is wider than it is tall. The internal link on page 1 and the outline entry “3 Landscape page” both lead here.

Region	Q1	Q2	Q3	Q4	Total	vs. last year
North America	1,250	1,310	1,405	1,520	5,485	+6.4 %
Europe	980	1,015	990	1,102	4,087	+3.1 %
Asia Pacific	1,430	1,505	1,610	1,755	6,300	+9.8 %
Latin America	410	395	430	468	1,703	-1.2 %
Middle East & Africa	300	322	341	360	1,323	+4.7 %
Total	4,370	4,547	4,776	5,205	18,898	+5.9 %

Table 1: revenue by region and quarter (thousand €). Numbers are right-aligned; the header row has a filled background, every second row is shaded and the total row is bold.

4 Searching and selecting text

Every word in this file is real text drawn with standard fonts, so it can be selected with the mouse, copied with Ctrl+C and found with the search box.

Find test: the word on this line comes in three spellings — needle, Needle and NEEDLE. A search without Match case finds all three; with Match case on, a search for the lowercase word finds one.

4.1 Lists

- Zoom with Ctrl+Plus and Ctrl+Minus, or fit the page width to the window.
 - The outline panel lists the headings of all four pages; the entry “2 Image” starts collapsed.
 - Page 3 uses landscape orientation (11 × 8.5 inches); the other pages are US Letter portrait.
1. Open the file in VS Code.
 2. Use Page Up and Page Down to move between the pages.
 3. Click a link: external links open in the browser, internal links jump inside the document.

4.2 A long paragraph

A PDF file is a set of numbered objects: dictionaries, arrays, strings, numbers and streams. The catalog points to the page tree, the outline and the named destinations; every page points to its resources (fonts, images and graphics states), its content stream and its annotations. The cross-reference table at the end of the file stores the byte offset of every object, which is why a viewer can open page 4 without reading pages 1 to 3 first. Text is placed glyph by glyph with explicit coordinates, so a viewer that wants to select or search text has to rebuild words and lines from those positions — this paragraph is long enough to check that wrapped lines come back in the right order.

[Back to the first page](#) or to [the landscape table](#) (both links use named destinations).

End of document.
